

Convert CPU09GPP Rev 0.2 to Rev 1.0

Make the cut-out with an simple x/y table mounted on a mini column drill.
And a 1.5 mm PCB frees.

Note:

When using the 09FLP with DC2 connectors
you can put the two LED's on the solder side.

So you can see them. The print also needs some patches see: 'Patch_rev0.2'.
